

FIG URE 3-30
Hoekens linkage geometry. Linkage shown with $P$ at center of straight-line portion of path

The structural errors were computed separately for each of nine crank-angle ranges $\Delta \beta$ from $20^{\circ}$ to $180^{\circ}$. Table 3-1 shows the link ratios that give the smallest possible structural error in either position or velocity over values of $\Delta \beta$ from $20^{\circ}$ to $180^{\circ}$. Note that one cannot attain optimum straightness and minimum velocity error in the same linkage. However, reasonable compromises between the two criteria can be achieved, especially
